<Information Security Policy>

We, wundou Corp., are a sportswear maker and supplier.

Thus, we produce, supply wundou products and all other related activities, including but not limited to protecting consumer's personal and company information that might cause or lead to information leakage or other accidental events. We will continue to devise, apply and improve a system (e.g. ISMS) that helps improve and develop our information security policy.

We have proposed the following steps to take to apply and improve the above (ISMS) system.

- We intend to follow the objectives mentioned in the above Information Security Policy and establish a clear direction to follow.
 - 1) We will create a training program for employees, working with personal information, which sets out to educate about Information Securities.
 - 2) Establish and follow a risk management standard by assessing and evaluating risks.
 - 3) Implementing management safety measures to respond to risk levels for all sections and departments to value, follow and manage.
- We will comply with the laws, rules of our industries, and other duties regarding security information.
- We will create the necessary environment for the ISMS mentioned above and the environment to efficiently maintain risk management.
- We will reassess and readjust when there are changes to the environment and to the continuing improvements of our policy.
